EDUARDO ZUNIGA

SOFTWARE ENGINEERING CONSULTANT | FINTECH · JAVA · SECURITY & INTEGRATIONS

eduzsantillan@gmail.com | English & Spanish | Remote / International

Senior software engineer with 10 years of backend and enterprise delivery in fintech and financial services. Available for scoped projects covering technical discovery, design, implementation, integration, testing and source-code handover.

PROBLEMS I HELP COMPANIES SOLVE

- Secure sensitive customer journeys: KYC onboarding, account recovery, device trust, and authorization controls around financial transactions.
- Integrate financial and enterprise platforms: payment and partner APIs, data flows, internal services, and business workflow automation.
- Modernize Java applications: service extraction, modularization, reliability improvements, and performance troubleshooting.

SELECTED WORK / REPRESENTATIVE ENGAGEMENTS

Financial identity & transaction security | Ontop Fintech platform
- Implemented end-to-end KYC processes and added trusted-device and verification controls supporting protection of password recovery and financial-transfer flows.

Payment integration & account capabilities | Ontop Fintech platform
- Developed backend capabilities for Global Accounts, payment integrations, USDC-related workflows and contractor payment requests, working across services and event-driven systems.

Performance & service decoupling | Ontop Fintech platform
- Reduced a high-traffic reporting flow from approximately 100 seconds to under 1 second; extracted shared integration logic into an independent service to reduce inter-service coupling.

Enterprise application modernization | Martin Bros. / FullStack Labs ERP platform | 2026
- Contributed to consolidation of 12 WAR deployments into 4 domain-aligned units, investigated business workflow defects, and validated changes within a large Java regression environment.

Customer identity & process automation | SURA – Integra AFP Financial services
- Developed document/selfie verification using AWS Rekognition, single-active-session controls, and cross-channel customer-service automations.

HOW I STRUCTURE AN ENGAGEMENT

DISCOVER & SCOPE → IMPLEMENT & VALIDATE → HANDOVER. Define requirements, deliver testable milestones, and provide agreed source code, documentation and deployment guidance.

TECHNOLOGY FOCUS

Core: Java 8–21, Spring Boot, Spring Security, JPA/Hibernate, REST APIs, SQL, PostgreSQL, Kafka

Delivery: AWS, Docker, Kubernetes, CI/CD, Flyway, JUnit, Mockito, ELK; React/TypeScript for supporting interfaces

PROFESSIONAL BACKGROUND & EDUCATION

Senior Full Stack Engineer — Martin Bros. / FullStack Labs (2026–Present) | Senior Backend Engineer — Ontop (2023–2026) | Full Stack Engineer — SURA–Integra AFP (2021–2023) | Senior IT Analyst — Profuturo AFP (2018–2021)

B.Sc. Computer Science Engineering — Universidad de San Martín de Porres | Software Systems Development (Honors) — BCIT
